Communication Techniques: MPI_Bcast( )

AIM

Write a 'C' program to initialize the communication pattern of a broadcast. The code logic can typically have a process zero [as root], which has the initial copy of the data to broadcast to other processes [as shown in the below figure].

Hint:The function prototype is as follows:

```
MPI_Bcast(
          void* data,
          int count,
          MPI_Datatype datatype,
          int root,
          MPI_Comm communicator)
```
